

## Week 4 - Chemistry at Home Learning - Week of 4/6/2020 - 4/10/2020

### *Overview and House Keeping Notes:*

1. There was a form posted on Friday as a way to check-in about your learning from last week. Please work to finish this before starting the new topics this week.
2. I will be available in a couple of ways to you during this week.
  - a. For questions about the new learning...Not too many of you used the collaboration space last week, but I am checking it and responding as needed.
  - b. Some of you have emailed me this past week and that is fine too for this week.
3. **Looking Ahead**...This week is a continuation of last week where we are trying to learn how to characterize acid and base solutions. I will post a Form on Friday for you to complete as a check-in of your learning. Next week we will start looking at what happens when acids and bases are combined in one solution.

### STUDENT WORK FOR 4/6 - 4/10

Monday - Begin neutralization reaction

Tuesday - Begin neutralization reactions

Wednesday - Free Day. Use this day to relax or finish the tutorial work if you need extra time. I will not be available on this day, so make a plan to contact me Monday or Tuesday if you have questions.

Thursday - Moving neutralization reactions into the laboratory

Friday - Moving neutralization reactions into the laboratory

By the end of the week I will post a OneNote form for you to complete so that I can take a look at your understanding. I will send out an email when the form is ready. Please complete this form by Monday, April 13. It is not an exam, but a way for me to figure out what you understood and what we need to focus on the following week before moving on and talking about how to apply the ideas in a lab context.

A parent link to the common pages of the class notebook can be reached here:
